

These inputs have been provided by the **Bhashini Team** for the implementation of **translation blocking for Hindi** under the Bhashini translation system.

[EMAIL]

Dear Sir,

As discussed this morning, kindly ensure the following updates are implemented:

- Please add the 'bhashini-skip-translation' **class** in the body to skip translation for the Hindi page.
- Additionally, incorporate logic to load the Hindi content directly from your CMS.

Please let me know once this is done or if any clarification is required.

[AS PER THE MEETING MINUTES]

As discussed in the recent meeting with the Bhashini Team, ADG and NSFDC

1. Bhashini Skip Translation is implemented in this website :
<https://www.mstcindia.co.in/>
2. We are required to implement the **bhashini-skip-translation** attribute within the HTML body wherever translation needs to be restricted.
3. Please review the existing header/plugin configuration to verify whether the blocking functionality is working correctly with the currently implemented Bhashini plugin.
4. Additionally, confirm whether any **new header tags or configurations** are required to enable or improve the skip-translation/blocking functionality.
